

AWS Commands Reference Sheet

1. EC2 (Elastic Compute Cloud)

- `aws ec2 run-instances`: Launches a new EC2 instance.
- `aws ec2 describe-instances`: Lists your instances and their metadata.
- `aws ec2 start-instances`: Powers on a stopped instance.
- `aws ec2 stop-instances`: Gracefully shuts down a running instance.
- `aws ec2 terminate-instances`: Permanently deletes an instance and its root volume.

2. S3 (Simple Storage Service)

- `aws s3 mb s3://bucket-name`: Creates a new storage bucket.
- `aws s3 ls`: Lists all buckets or the contents of a specific bucket.
- `aws s3 cp local-file.txt s3://bucket-name/`: Uploads a file to S3.
- `aws s3 sync local-dir/ s3://bucket-name/`: Efficiently uploads/updates a whole directory.
- `aws s3 rm s3://bucket-name/file.txt`: Deletes an object from a bucket.

3. IAM (Identity and Access Management)

- `aws iam list-users`: Shows all users in the AWS account.
- `aws iam create-user --user-name [Name]`: Creates a new identity.
- `aws iam create-access-key --user-name [Name]`: Generates credentials for API access.
- `aws iam attach-user-policy`: Grants specific permissions (like `AdministratorAccess`) to a user.
- `aws iam list-groups`: Lists user groups in the account.
